"Traditionally, investments textbooks tend to fall into one of two camps. The first type has a greater focus on portfolio management and covers a significant amount of portfolio theory. The second type is more concerned with security analysis and generally contains fairly detailed coverage of fundamental analysis as a tool for equity valuation. Today, most texts try to cover all the bases by including some chapters drawn from one camp and some from another. The result of trying to cover everything is either a very long book or one that forces the instructor to bounce back and forth between chapters. This frequently leads to a noticeable lack of consistency in treatment. Different chapters have completely different approaches: Some are computational, some are theoretical, and some are descriptive. Some do macroeconomic forecasting, some do mean-variance portfolio theory and beta estimation, and some do financial statements analysis. Options and futures are often essentially tacked on the back to round out this disconnected assortment"--

The text also makes extensive use of examples, drawing on material from the world around us and using familiar companies wherever appropriate. Throughout, the text strikes a balance by introducing and covering the essentials while leaving some of the details to follow-up courses. Loose Leaf for Investments - Zvi Bodie, Professor 2020-01-06

Investments sets the standard as a graduate (MBA) text intended primarily for courses in investment analysis. The guiding principle has been to present the material in a framework that is organized by a central core of consistent fundamental principles and will introduce

students to major issues currently of concern to all investors. In an effort to link theory to practice, the authors make their approach consistent with that of the CFA Institute. Many features of this text make it consistent with and relevant to the CFA curriculum. The common unifying theme is that security markets are nearly efficient, meaning that most securities are priced appropriately given their risk and return attributes. Investments is also organized around several important themes: The central theme is the near-informational-efficiency of well-developed security markets and the general awareness that competitive markets do not offer "free lunches" to participants. A second theme is the risk-return trade-off. Also, this text places great emphasis on asset allocation. Finally, this text offers a broad and deep treatment of futures, options, and other derivative security markets.
