John F. Kennedy Student Paper Competition and Specialty Seminar Summaries - International Association for Hydraulic Research. Congress 1997

Papers from a student competition and summaries of specialty seminars at the 27th Congress of the International Association for Hydraulic Research (IAHR), held in San Francisco, California, August 10-15, 1997. This collection contains 12 papers and four summaries that relate to the conference theme, Water for a Changing Global Community. The papers resulted from the John F. Kennedy Student Paper Competition. The competition was established by the IAHR Council in 1992 to honor the memory of Professor John F. Kennedy, a prominent educator and researcher in the international hydraulics community. The student papers cover such topics as detection of hairpin vortices; deposition of fine suspended sediment; semi-empirical modeling of sediment transport; thermal regime of the Missouri River; and hot-film shear stress measurements in laminar and turbulent flows. Summaries of four specialty seminars are included covering multidirectional waves, wind energy, continuing education, and hydroinformatics.

*Civil Engineering Hydraulics* - Martin Marriott 2009-07-20

This thorough update of a well-established textbook covers a core subject taught on every civil engineering course. Now expanded to cover environmental hydraulics and engineering hydrology, it has been revised to reflect current practice and course requirements. As previous editions, it includes substantial worked example sections with an on-line solution manual. A strength of the book has always been in its presentation these exercises which has distinguished it from other books on hydraulics, by enabling students to test their understanding of the theory and of the methods of analysis and design. Civil Engineering Hydraulics provides a succinct introduction to the theory of civil engineering hydraulics, together with a large number of worked examples and exercise problems with answers. Each chapter includes a worked example section with solutions; a list of recommended reading; and exercise problems with answers to enable students to assess their understanding. The book will be invaluable throughout a student's entire course - but particularly for first and second year study, and will also be welcomed by practising engineers as a concise reference.

**LABORATORY MANUAL HYDRAULICS AND HYDRAULIC MACHINES** - R. V. RAIKAR 2012-09-27

This manual presents 31 laboratory-tested experiments in hydraulics and hydraulic machines. This manual is organized into two parts. The first part equips the student with the basics of fluid properties, flow properties, various flow measuring devices and fundamentals of hydraulic machines. The second part presents experiments to help students understand the basic concepts, the phenomenon of flow through pipes and flow through open channels, and the working principles of hydraulic machines. For each experiment, the apparatus required for conducting the experiment, the probable experimental set-up, the theory behind the experiment, the experimental procedure, and the method of presenting the experimental data are all explained. Viva questions (with answers) are also given. In addition, the errors arising during recording of observations, and various precautions to be taken during experimentation are explained with each experiment. The manual is primarily designed for the undergraduate degree students and diploma students of civil engineering, mechanical engineering and chemical engineering.

**Professional Services in the EU Internal Market** - Tinne Heremans 2012-01-31

Professional services are a key component of the EU internal market economy yet also significantly challenge the legal framework governing this internal market. Indeed, specific professional regulatory structures, which are often the result of a blend of government and self-regulation, hold clear potential for conflict with EU free movement and competition law rules. Hence this book looks at the manner in which both free movement and competition laws might apply to such self- and co-regulatory set-ups, and at the leeway given to quality considerations (apparently) conflicting with free movement or competition objectives. In addition, since court action will seldom suffice to genuinely integrate a market, the book also explores those instruments of EU secondary legislation that are likely to impact the most on the provision of professional services. However, the book goes beyond a mere inventory to ask how EU Internal Market policy could contribute to the optimal legal environment for professional services. A law and economics analysis is employed to investigate the need for specific professional rules, the preferred type of regulator (self-, co- or government regulation), and the level - national and/or European - at which regulation should be adopted. As becomes clear, the story of the market for professional services is one of market and government failure; the author is thus left to compare imperfect situations where market failures compete with rent-seeking efforts, the tendency towards over-centralisation and national protectionism. This book offers both an in-depth legal analysis of the EU framework as it applies to professional services as well as a more normative evaluation of this framework based on insights from law and economics scholarship. It will therefore be a valuable resource for all practitioners, policy-makers and academics dealing with professional services, as well as, more generally, with questions of quality and self-regulation.
