The Critical Few - Jon Katzenbach 2019-01-16

In a global survey by the Katzenbach Center, 80 percent of respondents believed that their organization must evolve to succeed. But a full quarter of them reported that a change effort at their organization had resulted in no visible results. Why? The fate of any change effort depends on whether and how leaders engage their culture: the self-sustaining patterns of behaving, feeling, thinking, and believing that determine how things are done in an organization. Culture is implicit rather than explicit, emotional rather than rational—that's what makes it so hard to work with, but that's also what makes it so powerful. For the first time, this book lays out the Katzenbach Center's proven methodology for identifying your culture's three most critical elements: traits, characteristics that are at the heart of people's emotional connection to what they do; keystone behaviors, actions that would lead your company to succeed if they were replicated at a greater scale; and authentic informal leaders, people who have a high degree of "emotional intuition" or social connectedness. By leveraging these critical few elements, you can tap into a source of catalytic change within your organization. People will make an emotional, not just a rational, commitment to new initiatives. You will elicit enthusiasm and creativity and build the kind of powerful company that people recognize for its innate value and effectiveness.

China's State Enterprises - Ran Li 2018-06-27

This book focuses on the nature and significance of China's state enterprises which have undergone substantial changes since China's economic liberalization in 1978. It argues that much of the criticism is based on mistaken premises, where even the term 'state-owned enterprises' is a misnomer given that the emphasis is much less on ownership than on control. Using numerous case studies, this book highlights the extent to which these enterprises have evolved in response to reforms, and provides an in-depth analysis of their role in China's outward investment strategy in the "Belt and Road" initiative. This role speaks to their growing influence as China expands her global footprint.

World Economic Outlook, October 2016 - International Monetary Fund. Research Dept. 2016-10-04

According to the October 2016 "World Economic Outlook," global growth is projected to slow to 3.1 percent in 2016 before recovering to 3.4 percent in 2017. The forecast, revised down by 0.1 percentage point for 2016 and 2017 relative to April's report, reflects a more subdued outlook for advanced economies following the June U.K. vote in favor of leaving the European Union (Brexit) and weaker-than-expected growth in the United States. These developments have put further downward pressure on global interest rates, as monetary policy is now expected to remain accommodative for longer. Although the market reaction to the Brexit shock was reassuringly orderly, the ultimate impact remains very unclear, as the fate of institutional and trade arrangements between the United Kingdom and the European Union is uncertain. Financial market sentiment toward emerging market economies has improved with expectations of lower interest rates in advanced economies, reduced concern about China's near-term prospects following policy support to growth, and some firming of commodity prices. But prospects differ sharply across countries and regions, with emerging Asia in general and India in particular showing robust growth and sub-Saharan Africa experiencing a sharp slowdown. In advanced economies, a subdued outlook subject to sizable uncertainty and downside risks may fuel further political discontent, with anti-integration policy platforms gaining more traction. Several emerging market and developing economies still face daunting policy challenges in adjusting to weaker commodity prices. These worrisome prospects make the need for a broad-based policy response to raise growth and manage vulnerabilities more urgent than ever.

Future of Jobs - IntroBooks Team

Times are changing and the labor markets are under immense burden from the collective effects of various megatrends. Technological growth and grander incorporation of economies along with global supply chains have been an advantage for several workers armed with high skills and in growing occupations. However, it is a challenge for workers with low or obsolete skills in diminishing zones of employment. Business models that are digitalized hire workers as self-employed instead of standard employees. People seem to be working and living longer, but they experience many job changes and the peril of skills desuetude. Inequalities in both quality of job and earnings have increased in several countries. The depth and pace of digital transformation will probably be shocking. Industrial robots have already stepped in and artificial

intelligence is making its advance too. Globalization and technological change predict the great potential for additional developments in labor market performance. But people should be ready for change. A progression of creative annihilation is probably under way, where some chores are either offshored or given to robots. A better world of for jobs cannot be warranted - a lot will be contingent on devising the right policies and institutes in place.

Modi's Vision 2030 - Dr. Virendra Singh Baghel

India started its economic reforms in 1991 and has seen huge incremental benefits – greater openness, higher growth and substantial poverty reduction. India is now the world's sixth largest economy and has seen major transformation in many parts of the economy and the country. But with new opportunities have come new challenges which are now being tackled. Seminal reforms such as GST and IBC are transforming the economic landscape of the country. India's infrastructure deficit is being addressed at a faster pace and the ease of doing business is being tackled on a war footing with India's global rankings showing huge improvements. But yet more needs to be done as the aspirations of India's young population are huge. India is also in the midst of a huge demographic transformation which if taken advantage of can propel India to even higher levels of growth. The benefits of India's demographic dividend and a huge domestic market puts it in an advantageous position to become a \$9 - 10 trillion economy by 2030. However, our economic growth is contingent on improving competitiveness, attracting more investment, creating enough employment opportunities to absorb the growing population and overcoming the challenges of exclusion and inequitable access due to

multiple deprivations of class, caste and gender – all of which require disruptive approaches to find solutions. Unfortunately, there is no single silver bullet, no one action that will fix all the problems that we face currently. Rather, we need to act on several fronts. The Modi's Vision 2030" was initiated with a view to chart out an agenda of reforms and programmes in 10 inter-connected areas that will help drive India to its goals of shared prosperity by 2030 and a more competitive economy rising to become the third largest in the world. This report, encompassing ten underpinning chapters, identifies the challenges of tomorrow, points to key choices ahead, and recommends not just "what" needs to be reformed, but "how" to undertake the reforms. Policy consistency and coordination is essential if we are to achieve inclusive growth and significantly reduce unemployment. Productivity and investment-led transformation can inject new dynamism into the economy and ensure future growth, employment, and prosperity. This would enable the economy to gain the momentum it needs to become the global economic centre and become a magnet for investments. In the last 91 years, FICCI has played an active role in the progress and development of the Indian economy, representing not just the voice of industry but also being an active partner in the development agenda of the government. By 2030, India should transcend a new era of transformation and FICCI will continue to contribute to the building of a "New India". We are confident that you will find this report insightful and engaging and look forward to your feedback and suggestions.

Strategy That Works - Paul Leinwand 2016-01-12

How to close the gap between strategy and execution Two-thirds of executives say their organizations don't have the capabilities to support their strategy. In *Strategy That Works*, Paul Leinwand and Cesare Mainardi explain why. They identify conventional business practices that unintentionally create a gap between strategy and execution. And they show how some of the best companies in the world consistently leap ahead of their competitors. Based on new research, the authors reveal five practices for connecting strategy and execution used by highly successful enterprises such as IKEA, Natura, Danaher, Haier, and Lego. These companies:

- Commit to what they do best instead of chasing multiple opportunities
- Build their own unique winning capabilities instead of copying others
- Put their culture to work instead of struggling to change it
- Invest where it matters instead of going lean across the board
- Shape the future instead of reacting to it

Packed with tools you can use for building these five practices into your organization and supported by in-depth profiles of companies that are known for making their strategy work, this is your guide for reconnecting strategy to execution.
