[Global Diffusion of EHealth: Making Universal Health Coverage Achievable](#) - World Health Organization  
2017-03-27

This third global survey of the WHO Global Observatory for eHealth (GOe) investigated

how eHealth can support universal health coverage(UHC) in Member States. A total of 125 countries participated in the survey ? a clear reflection of the growing interest in this area. The report considers eHealth foundations

built through policy development funding approaches and capacity building in eHealth through the training of students and professionals. It then observes specific eHealth applications such as mHealth telehealth electronic health records systems and eLearning and how these contribute to the goals of UHC. Of interest is the extent to which legal frameworks protect patient privacy in EHRs as health care systems move towards to delivering safer more efficient and more accessible health care. Finally the rapidly emerging areas of social media for health care as well as big data for research and planning are reported.

Are science and religion compatible when it comes to understanding cosmology (the origin of the universe), biology (the origin of life and of the human species), ethics, and the human mind (minds, brains, souls, and free will)? Do science and religion occupy non-overlapping magisteria? Is Intelligent Design a scientific theory? How do the various faith traditions view the

relationship between science and religion? What, if any, are the limits of scientific explanation? What are the most important open questions, problems, or challenges confronting the relationship between science and religion, and what are the prospects for progress? These and other questions are explored in *Science and Religion: 5 Questions*-a collection of thirty-three interviews based on 5 questions presented to some of the world's most influential and prominent philosophers, scientists, theologians, apologists, and atheists. **Canonical Ramsey Theory on Polish Spaces** - Vladimir Kanovei 2013-09-12

This book lays the foundations for an exciting new area of research in descriptive set theory. It develops a robust connection between two active topics: forcing and analytic equivalence relations. This in turn allows the authors to develop a generalization of classical Ramsey theory. Given an analytic equivalence relation on a Polish space, can one find a large subset of the space on which it has a simple form? The book provides many positive and negative general answers to this question. The proofs feature proper forcing and Gandy-Harrington forcing, as well as partition arguments. The results include strong canonization theorems for many classes of equivalence relations and sigma-ideals, as

well as ergodicity results in cases where canonization theorems are impossible to achieve. Ideal for graduate students and researchers in set theory, the book provides a useful springboard for further research.

**Free Will Skepticism in Law and Society** - Elizabeth Shaw 2019-08-29

'Free will skepticism' refers to a family of views that all take seriously the possibility that human beings lack the control in action - i.e. the free will - required for an agent to be truly deserving of blame and praise, punishment and reward. Critics fear that adopting this view would have harmful consequences for our interpersonal relationships, society, morality, meaning, and laws. Optimistic free will skeptics, on the other hand, respond by arguing that life without free will and so-called basic desert moral

responsibility would not be harmful in these ways, and might even be beneficial. This collection addresses the practical implications of free will skepticism for law and society. It contains eleven original essays that provide alternatives to retributive punishment, explore what (if any) changes are needed for the criminal justice system, and ask whether we should be optimistic or pessimistic about the real-world implications of free will skepticism.

**Rise of the Duke** - Dayna Quince 2021-05-17

ON THE RUN Emma McKinnon must escape an unwanted suitor and his manipulative sister, who won't take no for an answer. Marriage might save her from destitution, but she'd only be trading one nightmare for another. As a penniless vicar's daughter, she has nothing to lose except ownership of her heart. Emma takes a position as a governess on Star Frost, an elusive island off the coast of Cornwall. From the moment of his birth, Calvin Stanley West, Duke of Renvere,

was blessed. But none of his successes and wealth could have prepared him for the fire that killed his wife and left him and one of his daughters horrifically scarred. Worse still, the same glittering aristocratic society that had bowed in his presence now whispered cruel insults about his children. He abandoned his life, his prestige, and secreted his daughters away to a place where no whispered barbs would reach their precious ears. THEY CAN'T HIDE FOREVER Calvin's prayers are answered when a governess arrives on his doorstep, but this is no ordinary governess. She's young, beautiful, and she stirs a passion inside him he thought had been burned away forever. Emma swiftly becomes enamored with Star Frost and her new charges. But the duke, though scarred and intimidating, is also kind, dedicated to his children, and the most handsome man she'd ever seen. He makes her long for things she'd been raised to never feel. Is it a trick of the mysterious island or is the

duke the one man her heart has yearned for all along? Just when she feels safe and the attraction between them ignites into a passionate affair, the people she ran from have hunted her down, shattering her hopes. Emma's instinct is to run again, but if she does, she will have to give up everything she loves or stay and fight for her heart's desire. The choice should be easy, but is desire enough for her? Can Calvin love her in return or will the memory of his wife turn their passionate affair to ash?

*Recent Advances in Analytical Chemistry* - - Mitchell C.

Ainsworth 2007-03

PREFACE. THE Author of this very practical treatise on Scotch Loch - Fishing desires clearly that it may be of use to all who had it. He does not pretend to have written anything new, but to have attempted to put what he has to say in as readable a form as possible. Everything in the way of the history and habits of fish has been studiously avoided, and technicalities have been used as sparingly as possible. The writing of this book has afforded him pleasure in his leisure moments, and that

pleasure would be much increased if he knew that the perusal of it would create any bond of sympathy between himself and the angling community in general. This section is interleaved with blank sheets for the readers notes. The Author need hardly say that any suggestions addressed to the care of the publishers, will meet with consideration in a future edition. We do not pretend to write or enlarge upon a new subject. Much has been said and written-and well said and written too on the art of fishing but loch-fishing has been rather looked upon as a second-rate performance, and to dispel this idea is one of the objects for which this present treatise has been written. Far be it from us to say anything against fishing, lawfully practised in any form but many pent up in our large towns will bear us out when we say that, on the whole, a days loch-fishing is the most convenient. One great matter is, that the loch-fisher is depend- ent on nothing but enough wind to

curl the water, -and on a large loch it is very seldom that a dead calm prevails all day, -and can make his arrangements for a day, weeks beforehand whereas the stream- fisher is dependent for a good take on the state of the water and however pleasant and easy it may be for one living near the banks of a good trout stream or river, it is quite another matter to arrange for a days river-fishing, if one is looking forward to a holiday at a date some weeks ahead. Providence may favour the expectant angler with a good day, and the water in order but experience has taught most of us that the good days are in the minority, and that, as is the case with our rapid running streams, - such as many of our northern streams are, -the water is either too large or too small, unless, as previously remarked, you live near at hand, and can catch it at its best. A common belief in regard to loch-fishing is, that the tyro and the experienced angler have nearly the same chance in fishing, -the one from the stern and the

other from the bow of the same boat. Of all the absurd beliefs as to loch-fishing, this is one of the most absurd. Try it. Give the tyro either end of the boat he likes give him a cast of ally flies he may fancy, or even a cast similar to those which a crack may be using and if he catches one for every three the other has, he may consider himself very lucky. Of course there are lochs where the fish are not abundant, and a beginner may come across as many as an older fisher but we speak of lochs where there are fish to be caught, and where each has a fair chance. Again, it is said that the boatman has as much to do with catching trout in a loch as the angler. Well, we dont deny that. In an untried loch it is necessary to have the guidance of a good boatman but the same argument holds good as to stream-fishing...

Why Beliefs Matter - E. Brian Davies 2010-07-09

In the follow-up to his acclaimed *Science in the Looking Glass*, Brian Davies discusses deep problems about

our place in the world, using a minimum of technical jargon. The book argues that 'absolutist' ideas of the objectivity of science, dating back to Plato, continue to mislead generations of both theoretical physicists and theologians. It explains that the multi-layered nature of our present descriptions of the world is unavoidable, not because of anything about the world, but because of our own human natures. It tries to rescue mathematics from the singular and exceptional status that it has been assigned, as much by those who understand it as by those who do not.

Working throughout from direct quotations from many of the important contributors to its subject, it concludes with a penetrating criticism of many of the recent contributions to the often acrimonious debates about science and religions.

**A Manual for Creating Atheists** - Peter Boghossian 2014-07-01

For thousands of years, the faithful have honed proselytizing strategies and

talked people into believing the truth of one holy book or another. Indeed, the faithful often view converting others as an obligation of their faith—and are trained from an early age to spread their unique brand of religion. The result is a world broken in large part by unquestioned faith. As an urgently needed counter to this tried-and-true tradition of religious evangelism, *A Manual for Creating Atheists* offers the first-ever guide not for talking people into faith—but for talking them out of it. Peter Boghossian draws on the tools he has developed and used for more than 20 years as a philosopher and educator to teach how to engage the faithful in conversations that will help them value reason and rationality, cast doubt on their religious beliefs, mistrust their faith, abandon superstition and irrationality, and ultimately embrace reason.

[The Star of Bethlehem](#) - Aaron Adair 2013-09-09

*The Star of Bethlehem: A Skeptical View* is an analysis of

the astronomical portent found in the Gospel of Matthew which supposedly led the Magi from the East to the birthplace of Jesus. Throughout history, people have tried to connect the Star to real, naturalistic phenomena, as well as to explain it in other ways. Adair takes a thorough look at all of these explanatory attempts, using the tools of science and astronomy, and finds them fundamentally wanting. Take a trip through the heavens above with Adair as he critically explores many centuries of flawed hypotheses, looking to answer the question "Did the Star of Bethlehem really exist?" This book is at the conjunction of science and religion. "Well researched, scientifically reasoned, elegantly concise, this book will long be required reading on the 'Star of Bethlehem'." Full of fascinating historical facts, and better informed and more careful than any other book on the subject, this should be on the shelf of everyone interested in that legendary celestial event." Richard Carrier, Ph.D., author

of Proving History: Bayes's Theorem and the Quest for the Historical Jesus. "A fascinating and readable feat of hardcore historical legwork and keen scientific analysis." David Fitzgerald, author of The Complete Heretic's Guide to Western Religion: The Mormons. ...tightly-argued, well-reasoned.... Adair masterfully demonstrates why every effort to rationalize the Star thus far has failed.... A concise and rigorous must-read for anyone interested in religion, history, and modern efforts to understand the past." Jason Colavito, author of The Cult of Alien Gods.

### **The Problem of Animal Pain**

- T. Dougherty 2014-07-22  
Animal suffering constitutes perhaps the greatest challenge to rational belief in the existence of God. Considerations that render human suffering theologically intelligible seem inapplicable to animal suffering. In this book, Dougherty defends radical possibilities for animal afterlife that allow a soul-making theodicy to apply to

their case.

### **The Evolving God** - J. David Pleins 2013-06-06

In focusing on the story of Darwin's religious doubts, scholars too often overlook Darwin's positive contribution to the study of religion. J. David Pleins traces Darwin's journey in five steps. He begins with Darwin's global voyage, where his encounter with religious and cultural diversity transformed his understanding of religion. Surprisingly, Darwin wrestles with serious theological questions even as he uncovers the evolutionary layers of religion from savage roots. Next, we follow Darwin as his doubts about traditional biblical religion take root, affecting his career choice and marriage to Emma Wedgwood. Pleins then examines Darwin's secret notebooks as he searches for a materialist theory of religion. Again, other surprises loom as Darwin's reading of Comte's three stages of religion's development actually predate his reading of Malthus. Pleins explores how Darwin applied

his discovery to the realm of ethics by formulating an evolutionary view of the "Golden Rule" in his *Descent of Man*. Finally, he considers Darwin's later reflections on the religion question, as he wrestled with whether his views led to atheism, agnosticism, or a new kind of theism. *The Evolving God* concludes by looking at some of the current religious debates surrounding Darwin and suggests the need for a deeper appreciation for Darwin as a religious thinker. Though he grew skeptical of traditional Christian dogma, Darwin made key discoveries concerning the role and function of religion as a natural evolutionary phenomenon.

**Systematic Atheology** - John R. Shook 2017-12-01

Atheology is the intellectual effort to understand atheism, defend the reasonableness of unbelief, and support

nonbelievers in their encounters with religion. This book presents a historical overview of the development of atheology from ancient thought to the present day. It offers in-depth examinations of four distinctive schools of atheological thought: rationalist atheology, scientific atheology, moral atheology, and civic atheology. John R. Shook shows how a familiarity with atheology's complex histories, forms, and strategies illuminates the contentious features of today's atheist and secularist movements, which are just as capable of contesting each other as opposing religion. The result is a book that provides a disciplined and philosophically rigorous examination of atheism's intellectual strategies for reasoning with theology. Systematic Atheology is an important contribution to the philosophy of religion, religious studies, secular studies, and the sociology and psychology of nonreligion.

**The Nonreligious** - Phil Zuckerman 2016

'The Nonreligious' provides a comprehensive and empirically-grounded account of what we know about the growing numbers of people who are non-religious. *Wounded Kiss* - Willow Winters From USA Today best-selling author, Willow Winters, comes a tempting tale of fated love, lust-filled secrets and the beginnings of an epic war. His chiseled jaw and silver gaze haunts both my nightmares and my dreams, though I've only ever gotten a glimpse of either. There's a treaty between us and them; mere mortals and the ones who terrify but keep us safe. The contract demands that every year there's an offering and this year I'll walk across that stage presenting myself. We have no idea what to expect if they choose someone, since they haven't done so in generations. The only thing we know is that the ones they take belong to them forevermore. If chosen, you don't come back, or so the story of the treaty goes. Gather and present yourself. This is the offering ... .. and I ...

belong to him.

*Reading Darwin in Arabic,  
1860-1950* - Marwa Elshakry  
2014-01-06

In *Reading Darwin in Arabic*, Marwa Elshakry questions current ideas about Islam, science, and secularism by exploring the ways in which Darwin was read in Arabic from the late 1860s to the mid-twentieth century. Borrowing from translation and reading studies and weaving together the history of science with intellectual history, she explores Darwin's global appeal from the perspective of several generations of Arabic readers and shows how Darwin's writings helped alter the social and epistemological landscape of the Arab learned classes. Providing a close textual, political, and institutional analysis of the tremendous interest in Darwin's ideas and other works on evolution, Elshakry shows how, in an age of massive regional and international political upheaval, these readings were suffused with the anxieties of empire and

civilizational decline. The politics of evolution infiltrated Arabic discussions of pedagogy, progress, and the very sense of history. They also led to a literary and conceptual transformation of notions of science and religion themselves. Darwin thus became a vehicle for discussing scriptural exegesis, the conditions of belief, and cosmological views more broadly. The book also acquaints readers with Muslim and Christian intellectuals, bureaucrats, and theologians, and concludes by exploring Darwin's waning influence on public and intellectual life in the Arab world after World War I. *Reading Darwin in Arabic* is an engaging and powerfully argued reconceptualization of the intellectual and political history of the Middle East. *Essential Readings in Evolutionary Biology* - Francisco J. Ayala 2014-03-15  
Traces scholarly thought from the nineteenth-century birth of evolutionary biology to the mapping of the human genome through forty-eight essays,

I never wanted it to end!" - *Heartbreakers and Heroes*  
**The Stud Next Door** - Kendall Ryan 2021-01-19  
A sexy, single dad standalone romance from New York Times bestselling author Kendall Ryan. Life threw me a

curveball. An adorable eight-pound, four-ounce curveball with her mother's eyes and my dark hair. I'd like to think my single-dad game is strong, but honestly? I've been struggling a little. When a beautiful young woman moves in next door and offers to give me a hand, I jump at the chance to hire her as a nanny. Jessa is amazing with my daughter. She's also patient, kind, and way too pretty. The number one rule of hiring a nanny? Don't bed the nanny. It's a rule I intend to keep. But as the days pass, I begin to realize how much my life is missing. Companionship. Romance. Intimacy. When I discover my heart has space for one more female, it's a lost cause, another curveball. The hot-as-hell nanny is leaving soon for a mission trip to Central America. No sense in letting myself fantasize about Jessa being a permanent part of my life. The closer we get, the more difficult it becomes to keep my feelings in check, because my heart won't listen. And neither will my libido. Well, you know what they say.

Rules are meant to be broken . . .

My name is Isadora, and my target is the Moretti Mafia. All new standalone from USA Today Best Selling Author T.L. Smith. Faithful to Science - Andrew M. Steane 2014

Science and religious faith are two of the most important and influential forces in human life, yet there is widespread confusion about how, or indeed

whether, they link together. This book describes this combination from the perspective of one who finds that they link together productively and creatively. The situation is not one of conflict or uneasy tension, or even a respectful dialogue. Rather, a lively and well-founded faith in God embraces and includes science, and scientific ways of thinking, in their proper role. Science is an activity right in the bloodstream of a reasonable faith. The book interprets theism broadly, and engages carefully with atheism, while coming from a Christian perspective. The aim is to show what science is, and what it is not, and at the same time give some pointers to what theism is or can be. Philosophy, evolution and the nature of science and human life are discussed in the first part of the book, questions of origins in the second. It is the very mind-set of scientific thinking that is widely supposed to be antagonistic to religious faith. But such suspicions are too

sweeping. They misunderstand both faith and science. Faith can be creative and intellectually courageous; science is not the all-embracing story that it is sometimes made out to be. It is not that science fails to explain some things, but rather, it does not explain anything at all, on its own. It is part of a larger explanation. And even explanation has to take a humble place; it is not the purpose of life.

**Meaning in Life** - Thaddeus Metz 2013-11-07

What makes a person's life meaningful? Thaddeus Metz offers a new answer to an ancient question which has recently returned to the philosophical agenda. He proceeds by examining what, if anything, all the conditions that make a life meaningful have in common. The outcome of this process is a philosophical theory of meaning in life. He starts by evaluating existing theories in terms of the classic triad of the good, the true, and the beautiful. He considers whether meaning in life might

be about such principles as fulfilling God's purpose, obtaining reward in an afterlife for having been virtuous, being attracted to what merits attraction, leaving the world a better place, connecting to organic unity, or transcending oneself by connecting to what is extensive. He argues that no extant principle satisfactorily accounts for the three-fold significance of morality, enquiry, and creativity, and that the most promising theory is a fresh one according to which meaning in life is a matter of intelligence contoured toward fundamental conditions of human existence.
