2011

Gabriel Tarde's *Monadology and Sociology*, originally published in 1893, is a remarkable and unclassifiable book. He argues that all of nature consists of elements animated by belief and desire, which form social aggregates analogous to those of human societies and institutions. In developing this central insight, Tarde outlines a metaphysical system which builds on both classical rationalist philosophy and the latest scientific theories of the time, in a speculative synthesis ...

State Power 2.0 - Muzammil M. Hussain

2016-04-01

Digital media and online social networking applications have changed the way in which dissent is organized with social movement leaders using online applications and digital content systems to organize collective action, activate local protest groups, network with international social movements and share their political perspectives. In the past, authoritarian regimes could control broadcast media in times of political crisis by destroying newsprint supplies, seizing radio and television stations, and blocking phone calls. It is much more difficult to control media in the digital age though there have certainly been occasions when states have successfully shut down their digital networks. What causes state-powers to block internet access, disable digital networks or even shut off internet access? How is it done, what is the impact and how do dissidents attempt to fight back? In this timely and accessible volume a collection of high profile,

international scholars answer these key questions using cases from Israel, Iran, Russia, Morocco, Vietnam and Kuwait and assess the political economy of the actors, institutions and regimes involved and effected by the state-management and control of digital networks.
