FNA Cytology of Soft Tissue and Bone Tumors - H.A.

Domanski 2017-07-27

Fine-needle aspiration cytology (FNAC) has been commonly used to follow up on previously treated sarcomas or to confirm soft tissue and bone metastases of carcinomas, melanomas or lymphomas. Its role as the first-

line approach in the diagnosis of primary soft tissue and bone tumors has increased due to progress of less invasive diagnostic procedures and the growing availability of diagnostic ancillary tests. This comprehensive and richly-illustrated volume presents cytomorphology of all common neoplastic soft tissue and bone lesions but also of rare tumors largely described in case reports. Key points for cytological features, differential diagnosis, and the use of ancillary tests are discussed and illustrated in order to facilitate the diagnostic work-up in FNA samples. The volume is organized on the basis of the most recent WHO classification used in surgical pathology in order to provide a practical guide for modern cytologic diagnosis of surgical soft tissue and bone pathology. It is aimed mainly at surgical pathologists and cytopathologists, but also at orthopedic surgeons and clinical oncologists.

Cytopathology of the Head and Neck - Gabrijela Kocjan

2017-04-24

Working practices for Head and Neck (HN) diagnostic and clinical teams have changed dramatically over the past 15 years with highlighted importance on specialist Multidisciplinary Teams (MDT) including radiologists and cytopathologists. To achieve high levels of diagnostic accuracy in this modern working environment, special training and commitment to cytopathology are required in addition to histopathology. Cytopathology of the Head and Neck: Ultrasound guided FNAC supports the learning of new

skills expected of practicing pathologists by providing a comprehensive approach to cytopathology, including performing FNAC and on site interpretation. New to this edition is coverage of ultrasound (US) guidance the use of which has emerged as an essential adjunct to either Fine Needle Aspiration Cytology (FNAC) or needle core biopsy, and is expected to increase. US combined with US guided FNAC is now recommended as the investigation method of first choice for HN lesions for evaluating regional metastases in HN patients, for both those with and those without palpable lumps. This second edition also includes: Companion website containing ultrasound case histories which detail imaging findings, list differential diagnosis and suggest further investigations compiled by Dr Simon Morley Expanded coverage of clinical images of head and neck masses Clear presentation of FNAC diagnostic features with images Clinical management

algorithms Examples of diagnostic of pitfalls and complications in FNAC This timely book fills the training gap required for pathologists and offers a team approach to head and neck lesions, with valuable input from radiologists, ENT (ear, nose, and throat) surgeons, oncologists, and medico-legal experts. This new edition reflects the emergent multidisciplinary approach to head and neck practice.

The Cytology of Soft Tissue Tumours - Måns Åkerman
2003-01-01

In the last few years, the primary diagnosis of soft tissue tumours has emerged as an important new target for fine needle aspiration (FNA). The purpose of this book is to facilitate the cytological evaluation of FNA smears from soft tissue tumours and to suggest cytological criteria for histotype diagnoses. Its primary aim is to describe and illustrate not only the most common types but also those rare tumours where cytological features have been largely described in case reports and in small series. The diagnostic use of ancillary methods is discussed and illustrated, and, in order to facilitate the diagnostic work-up in FNA samples, smears are also classified according to their principal microscopic patterns. The selection of entities presented, their diagnostic features and differential diagnostic considerations are mainly based on the experience

with FNA in the primary diagnosis of soft tissue tumours in patients referred to the Musculoskeletal Tumour Centre at the University Hospital in Lund, Sweden over the last 30 years. The illustrations have mainly been culled from cases in the files of the Department of Pathology and Cytology, Lund University Hospital. Soft tissue tumours are relatively rare and often difficult to correctly diagnose in fine needle aspirates.

Therefore, this publication should be welcomed by all cytopathologists involved in the FNA diagnosis of tumours as a valuable addition to their benchside textbooks.
